	Panel-Discussion	Beat Müllhaupt Magdalena Filipowicz Sinnreich
16.00	CLOSING REMARKS AND APÉRO	
	CME CREDITS: 5 SGG / SSG	

Dear Colleagues,

The GastroZentrum Hirslanden, founded in 1992, is celebrating its 30th anniversary this year. Since the very beginning, our aim has been to offer excellence in patient care and to always implement innovative procedures at the cutting edge of technological development. Over the last 30 years gastroenterology has seen a tremendous advancement in basic science, clinical research and new technologies. It was here at the Hirslanden clinic where the first capsule endoscopy was performed in Switzerland and the first botulinum toxin injection was applied for anal sphincter hypertension. Many advanced interventional endoscopic procedures such as Endoscopic Submucosal Dissection (ESD) and POEM-Therapy for achalasia were established in close cooperation with the pioneers of these techniques from Japan.

Today, we offer the complete spectrum of diagnostic and interventional gastroenterology as well as state of the art therapies for liver disease, inflammatory bowel disease and celiac disease incorporating also the newest findings in nutritional care. We always strive to provide innovative procedures and treatments to our patients.

The celebration of the 30th anniversary of the GastroZentrum Hirslanden gives us the opportunity to invite you to undertake this exciting journey to the future of gastroenterology with us. A panel of outstanding international and national experts will build bridges to a new era of gastroenterology and hepatology.

Sincerely,

Stefan Groth
Joachim Mertens
Andreas Müller
Kathrin Overbeck

Bernhard Sauter
Stefan Seewald
Jonas Zeitz
